

Iristick.G1 Smart Safety Glasses

Android and iOS compatible

Smart glasses portfolio built for every professional use case

The Iristick **smart safety glasses product portfolio** is designed specifically for various professional environments like field services, manufacturing, telemedicine and logistics, where safety, comfort, ruggedness and reliability are critical. The **Iristick.G1 looks like a normal pair of glasses** and is designed for maximum wearer comfort and specific use cases. **Other products in our portfolio** can be found on our website.

Hands-free guidance (including voice commands)

Wearable remote guidance reduces the time and cost of bringing experts to remote locations. Iristick's centrally positioned camera gives a true view of the operator's perspective while communicating instructions through **audio** and **visual** via the head-mounted display. Unlike other mobile solutions, Iristick **allows continuous hands-free remote assistance during a full shift**.

First time right

Adding visual information has proven to improve work execution and training, making Iristick ideal for complex logistics, technical services, production and healthcare services. Operators can walk the shop or production floor with both visual and audio queues without being burdened by additional handheld devices. The **Iristick.G1 development SDK** is the interface for off-the-shelf or bespoke software, enabling for example: virtual factory acceptance tests, guided logistics, digital field inspections, virtual quality inspections and remote proctoring.

Iristick.G1 6x optical zoom

The Iristick.G1's zoom module with its **6x optical zoom** lens is ideal for focusing on important details. Operators can keep a safe distance while sharing critical information with remote experts who can analyze the details. Additionally, the **built-in laser, flash LED** and soft scanner can **detect 3cm barcodes** at 1.5 meters distance.

Long-term and secure investment (iOS/Android)

The Iristick.G1 is compatible with both Android and iOS smartphones. This ensures increased processing power, long battery lifetime and standardized app-development. The Iristick.G1 is a standard managed edge device that integrates seamlessly with any MDM-system and **follows all corporate IT or security standards**.

Safe and comfortable

For Iristick, the wearer safety and comfort is paramount. Thanks to the pocket unit and phone connection, there is **minimal heat dissipation and electromagnetic radiation near the temple**. The Iristick.G1 is lightweight while being certified safety glasses. The display is mounted on a patented 3-axis arm providing a **stable image** and allowing it to be pivoted completely out of the field of view if needed. Adjustable nose pads and flexible temple tips optimize fit and tinted or prescription lenses can be mounted inside the glasses.
